

## **Burning a DVD**

*The only computer that is enabled to burn DVDs is the multimedia computer (#46) in the media center.*

1. Click Start>Programs>Nero>Nero 9>Nero Vision.
2. Choose “Make a DVD,” then “DVD Video”
3. Click “Import” on the left side, then “Import Files.”\*
4. Navigate to the right folder to find you file. If it imports correctly, your video should appear in the window. Click Next
5. Choose your menu type, and then click next.
6. We advise you do not pre-render because of the time it takes. Click next.
7. Put in your DVD in the drive and click “Burn.”
8. Roughly, if your video is 30 minutes, it will probably take 30 minutes for it to convert the file and burn it, and then a few extra minutes to create menus and such.
9. When your DVD is complete, the DVD drive will pop open.

*\*Nero Vision will burn a DVD from almost any type of video file (.avi, .mpg, etc.) including .wmv files, such as Photo Story files.*
